EDUCATION

DOCTOR OF PHILOSOPHY, Computer Science *Expected 2028*

Georgetown University, Graduate School of Arts and Sciences, Washington, DC

- Research: Perceived humanness of LLMs in online discourse; social media; fine-tuning methods and evaluation techniques for LLMs.
- Mentorship: Mentored and taught 30+ undergraduates across CS & Public Policy research programs (REU and MDI Scholars)

MASTER OF SCIENCE, Computer Science (Thesis) *May 2025*

Georgetown University, Graduate School of Arts and Sciences, Washington, DC

- Thesis: Developed the Perceived Humanness Indicator (PHI) metric; showed targeted training on high-quality preference pairs can outperform full-scale preference optimization for AI-generated political content.
- Positions: Massive Data Institute Scholar (interdisciplinary data science and public policy research program); GAIA Fellow, Georgetown AI Policy Fellowship.

BACHELOR OF SCIENCE, Computer Science (Magna Cum Laude, with Honors) *May 2023*

Long Island University, College of Engineering, New York, NY

- 3.9 GPA; Undergraduate Computer Science and Artificial Intelligence Award, Class of 2023
- Distinguished Scholar's Academic Scholarship; Division I Water Polo Scholarship. National College Athlete Honor Society (Chi Alpha Sigma); CWPA All-Academic Honors; MAAC Academic Honor Roll.

EXPERIENCE

Verition Fund Management: Quant Treasury Intern *(return offer received)* *New York, NY; May 2026 – Present*

- Built five automated Bloomberg market-intelligence bots end-to-end, from initialization to production on firm servers, one per asset class (UST, CAD, European govvies, corporates, JGB); each monitors dealer chatrooms and uses an LLM to filter chatter into market color, posting live signals plus morning and closing briefs directly to PMs' Bloomberg terminals.
- Developed a self-hosted global repo analytics portal pulling the firm's trades and positions from Oracle/Redshift daily, serving execution-quality dashboards vs. DTCC/street benchmarks across five markets, counterparty wallet and scorecard reports across 14 products, DV01 risk, and morning exception checks; improved overnight UST execution by ~0.5bp ($p < 0.0001$ vs. 1-year baseline).

Massive Data Institute, Georgetown University: Scholar *Washington, DC; May 2024 – August 2025*

- Curated a 4,000-post dataset (X, YouTube, TikTok, TruthSocial), collected pairwise preferences from 1,000+ evaluators, and built 5+ detection models benchmarking perceived humanness of AI-generated content during the 2024 US election cycle.
- Delivered 16 weeks of lectures and mentoring to 12 Research Experience for Undergraduates students across two summers.

iD Tech Online & Summer Camps *Various Locations, USA; May 2022 – August 2023, Summer 2025*

NVIDIA AI Success Coach, Machine Learning Lead Instructor, Assistant Camp Director

- Guided 150+ students through NVIDIA certification and 700+ lessons across 10+ computer science courses (including ML and AI), improving certification success rates by 20%; managed a team of 10 instructors.
